

Retina evaluates real-world digital experiences to reveal where online performance is being won or lost.

Digital experience is now the primary driver of awareness, consideration, and conversion. Gaps in clarity, usability, or technical performance create friction that costs pipeline — even for strong brands. Retina combines automated performance benchmarking with human strategic evaluation to surface exactly where those gaps are and what to do about them.

Retina assesses a website across five lenses on a 100-point scale, benchmarked against direct competitors. Two lenses are scored automatically using Google Lighthouse and BuiltWith data. Three are scored by a Matic analyst evaluating brand, experience, and conversion strategy. The result is a competitive intelligence report with prioritized recommendations mapped by effort and impact.

Lens		Max. value
	Brand & Messaging How clearly the website communicates who it is for, what it offers, and why it matters.	20 pts
	Experience & Design How intuitive, modern, and intentional the website feels - from navigation and layout to visual hierarchy and mobile responsiveness.	20 pts
	Conversion & Strategy How effectively the website turns attention into action through clear CTAs, logical user paths, and trust-building content.	20 pts
	SEO & AI Visibility How discoverable the website is to search engines, LLMs, and the algorithms that increasingly determine who gets found first.	20 pts
	Performance and Technical Health How fast, stable, and well-built the website is under the hood - page speed, code quality, security, and core web vitals.	20 pts
Understanding scores Each lens is worth 20 points. Scores of 15+ indicate strength in that dimension. The composite 100-point Retina Score provides an at-a-glance measure of overall digital experience readiness relative to the competitive set.		100 pts
